Transit Anna Seghers 2021-12-02 INTRODUCED BY STUART EVERS: 'A genuine, fully fledged masterpiece of the twentieth century; one that remains just as terrifyingly relevant and truthful in the twenty-first' An existential, political, literary thriller first published in 1944, Transit explores the plight of the refugee with extraordinary compassion and insight. Having escaped from a Nazi concentration camp in Germany and a work camp in Rouen, the nameless narrator finds himself in the dusty seaport of Marseille. Along the way he was asked to deliver a letter to Weidel, a writer in Paris whom he discovered had killed himself as the Nazis entered the city. Now he is in search of the dead man's wife. He carries Weidel's suitcase, which contains an unfinished novel - and a letter securing Weidel a visa to escape France. Assuming the name Seidler - though the authorities think he is in fact Weidel - he goes from cafe to cafe looking for Marie, who is in turn anxiously searching for her husband. As Seidler converses with refugees over pizza and wine, their stories gradually break down his ennui, bringing him a deeper awareness of the transitory world they inhabit as they wait and wait for that most precious of possessions: transit papers. 'This novel, completed in 1942, is in my opinion the most beautiful Seghers has written . . . almost flawless' - Heinrich Boll

The Glass Bead Game Hermann Hesse 2002-12-06 The Glass Bead Game, for which Hesse won the Nobel Prize for Literature in 1946, is the author's last and crowning achievement, the most imaginative and prophetic of all his novels. Setting the story in the distant postapocalyptic future, Hesse tells of an elite cult of intellectuals who play an elaborate game that uses all the cultural and scientific knowledge of the Ages. The Glass Bead Game is a fascinating tale of the

complexity of modern life as well as a classic of modern literature. This edition features a Foreword by Theodore Ziolkowski that places the book in the full context of Hesse's thought.

Propellants and Explosives Naminosuke Kubota 2015-06-22 This third edition of the classic on the thermochemical aspects of the combustion of propellants and explosives is completely revised and updated and now includes a section on green propellants and offers an up-to-date view of the thermochemical aspects of combustion and corresponding applications. Clearly structured, the first half of the book presents an introduction to pyrodynamics, describing fundamental aspects of the combustion of energetic materials, while the second part highlights applications of energetic materials, such as propellants, explosives and pyrolants, with a focus on the phenomena occurring in rocket motors. Finally, an appendix gives a brief overview of the fundamentals of aerodynamics and heat transfer, which is a prerequisite for the study of pyrodynamics. A detailed reference for readers interested in rocketry or explosives technology.
